Hummingbird Habitat and the Seasons Chains of Connections

Changes in the amount and strength of sunlight trigger all seasonal changes.

1. Think about changes the sun will bring about this season:
 - * changes in *nonliving* things (such as temperatures and water)
 - * changes in *living things* (plants and animals)
2. Draw some "chains" to show how changing sunlight affects different parts of the hummingbird's environment.
3. Use arrows to show how things cause other changes.
