

Selective Herbivory Data Sheet

Make observations of each Field Population System at least once a day during the study period. Note the time of day and where the butterfly larvae are, and compare the effects of their feeding on the different types of plants. Keep in mind that turnips and Fast Plants are varieties of the same *Brassica rapa* species. Lettuce is included to provide a different species for comparison purposes. Use as many data sheets as you need.

Date and time	Location of larvae	Comparison of feeding effects		
		Turnips	Fast Plants	Lettuce
