OBJECTIVE
To demonstrate an understanding of the Engineering Design Process while utilizing each stage to successfully complete a team challenge.

PROCESS SKILLS
Measuring, calculating, designing, evaluating

MATERIALS
General building supplies
Mailing tube, oatmeal canister, or small coffee can (used as size constraint)
2 - 2 cm plastic people (i.e. Lego®)

STUDENT PAGES
Design Challenge
Ask, Imagine and Plan
Experiment and Record

PRE-ACTIVITY SET-UP
Select a size constraint (mailing tube, oatmeal canister or coffee can). Fill in the sentence on the Design Challenge so students will know what the size constraint is for their CEV.

DESIGN challenge
To design and build a Crew Exploration Vehicle (CEV) that will carry two - 2 cm sized passengers safely and will fit within a certain volume (size limitation). The CEV will be launched in the next session.
MOTIVATE

• Show the NASA BEST video titled “Repeatability”:
  http://svs.gsfc.nasa.gov/goto?10515

• Ask the students why it is important to test their own designs.

SET THE STAGE:

ASK IMAGINE & PLAN

• Share the Design Challenge with the students.
• Remind students to imagine a solution and draw their ideas. All drawings should be approved before building.

CREATE

• Challenge students to build their CEVs based on their designs. Remind them to keep within specifications.
• Visit each team and test their designs to ensure they fit within the size specifications of the cylinder you are using.

EXPERIMENT

• Each team should conduct two drop tests from about 1 or 2 meters. The students can simply hold the CEV model over their heads and drop it. They should record their results after each test, and note what changes they plan to make as a result of the drop test.

IMPROVE

• After each drop test, the students should improve the CEV models based on the results of the experiment.

CHALLENGE CLOSURE

Engage the students with the following questions:

• What was the greatest challenge for your team today?
• Why was it important that the hatch stay closed during the drop tests?
• What process will your CEV undergo that makes it important for the astronauts to stay secured in their seats?
PREVIEWING NEXT SESSION

Ask teams to bring back their CEV model for use in next session’s challenge. You may want to store them in the classroom or have one of the facilitators be responsible for their safe return next session.

Ask teams to think about potential launch mechanisms before the next session. Tell them they will be building a launcher out of the standard materials that have been available to them, including large rubber bands.

DESIGN challenge

To design and build a Crew Exploration Vehicle (CEV) that will carry two - 2 cm sized passengers safely and will fit within a certain volume (size limitation). The CEV will be launched in the next session.

Design a CEV Teacher page
Taking humans back to the Moon...40 years later!

NASA needs a new vehicle to take astronauts to the Moon because the Space Shuttle was never designed to leave the Earth’s orbit. NASA and its industry partners are working on a space vehicle that will take astronauts to the Moon, Mars, and beyond. This spacecraft is called the Crew Exploration Vehicle (CEV). The CEV is a vehicle to transport human crews beyond low-Earth orbit and back again. The CEV must be designed to serve multiple functions and operate in a variety of environments.
THE CHALLENGE:

Each team must design and build a Crew Exploration Vehicle with the following constraints:

1. The CEV must safely carry two “astronauts”. You must design and build a secure seat for these astronauts, without gluing or taping them in place. The astronauts should stay in their seats during each drop test.

2. The CEV must fit within the ________ (i.e. mailing tube, oatmeal canister). This item serves simply as a size constraint. The CEV is not to be stored in this or launched from this item.

3. The CEV must have one hatch that opens and closes and is a size that your “astronauts” can easily enter/exit from. The hatch should remain shut during all drop tests.

To design and build a Crew Exploration Vehicle (CEV) that will carry two - 2 cm sized passengers safely and will fit within a certain volume (size limitation). The CEV will be launched in the next session.
What questions do you have about today’s challenge?

Draw your Crew Exploration Vehicle (CEV).
To design and build a Crew Exploration Vehicle (CEV) that will carry two - 2 cm sized passengers safely and will fit within a certain volume (size limitation). The CEV will be launched in the next session.

Draw an inside of your CEV to show where the people sit.

Review your team’s design. Answer the questions in the table.
